Executive Summary

In 2017, HDR Engineering, Inc. (HDR) conducted a Limited Environmental Records Review (LERR) of an approximately 4.6-mile section of South Carolina Highway 41 (SC 41) from US Highway 17 (US 17) to Clements Ferry Road, in Charleston and Berkeley Counties, South Carolina (Study Area). After completion of the 2017 LERR, the Study Area was expanded to include land east of SC 41, between Dunes West Boulevard and Bessemer Boulevard (**Figure 1**). Therefore, HDR conducted a supplemental LERR of the new portion of the Study Area (2019 Study Area) between Dunes West Boulevard and Bessemer Boulevard to identify high-risk properties with potential or existing environmental contamination. No major modifications were made to the corridor since the 2019 Study Area LERR was submitted.

The purpose of this LERR was to identify Recognized Environmental Conditions (RECs) that may adversely affect the Study Area, if present. This LERR was conducted in accordance with the scope and limitations outlined in our Scope of Services, dated January 15, 2019, and generally followed the standard of care of the ASTM International (ASTM) Practice E 1527-13. Although it is similar to an ASTM 1527-13 compliant Phase I Environmental Site Assessment, it does not qualify the user for "All Appropriate Inquiry" protections.

This LERR consisted of a review of environmental databases and a field reconnaissance. Environmental Data Resources (EDR) was contracted by HDR to complete a database search of federal, state, local, and tribal environmental records to inform the field reconnaissance conducted by HDR on January 12, 2022. HDR provided EDR with a map and requested a database search of up to one mile from the Study Area. The database search was performed by EDR on January 5, 2022. A copy of the EDR report is included in **Appendix A**. Note that for this supplemental LERR, HDR requested a new database search, historical aerial photographs, topographic maps, city directory listings, and fire insurance maps for the Study Area.

Information obtained from the EDR report, historical documents, and field reconnaissance were used to assign a risk ranking to sites of potential concern. General criteria used by HDR GeoEnvironmental staff in assigning risk are summarized in **Table 1** below.

Table 1. Risk Ranking Criteria

Risk Ranking	Criteria
Low	Low risk sites may have minimal impact to the cost and schedule of the project. This designation generally applies to petroleum and automotive repair sites within the Study Area, regardless of status of release(s).
Moderate	Moderate risk sites may have moderate impact to the cost and schedule of the project redevelopment. This designation generally applies to dry cleaning sites within or hydrogeologically up-gradient of the Study Area that are not listed in the NCDEQ Dry-Cleaning Solvent Cleanup Act (DSCA) Program and other sites impacted by constituents deemed by the Environmental Professional as more difficult to handle/remediate. Sites with Land Use Restrictions intended to limit ground disturbance are also included in this designation.
High	High risk sites may have high impact to the cost and schedule. High risk sites may include active and former landfill sites, closed hazardous waste landfill sites, federal brownfields sites, DSCA Program sites, and Superfund sites. These sites pose "high risk" to a project if they are located within a short distance from the Study Area, within the Study Area, or have a documented history of groundwater or soil contamination that is upgradient from the Study Area.

Findings

Findings of this LERR are as follows:

- The surrounding area consists of a mix of residential, commercial, and public land usage.
- Elevation within the 2022 Study Area ranges from approximately 3 to 75 feet. Groundwater is generally shallow, at a depth of less than 5 feet below ground surface, with deeper bedrock aquifers in the area reported between 1,800 to 2,000 feet deep. Local groundwater generally flows to Toomer or Horlbeck Creeks, which are tributaries to the Wando River. Regional groundwater flows east toward the Atlantic Ocean. Portions of the Study Area are located within the limits of a 100-year flood zone.
- Multiple sites of concern were identified in the EDR report. Site descriptions and regulatory listing information related to risk ranking determination are summarized in Table 2 (provided in Section 6.1). Identified sites of concern include existing or former underground storage tank (UST)/aboveground storage tank (AST)/leaking underground storage tank (LUST) facilities; Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) facilities; and landfill sites. EDR proprietary records were used as additional information to augment other data source reviews.
- The EDR report identified 39 "orphan" listings (listings for sites with insufficient or conflicting address information, which renders the sites unmappable). HDR reviewed the "orphan" listings and found that 14 sites were located within the Study Area.
- On January 12, 2022, HDR conducted a field reconnaissance of the Study Area. Properties were
 primarily residential or undeveloped with limited commercial (e.g., gasoline and convenience
 stores, boat storage yard) development and public use properties.

Opinions

HDR has reviewed the stated data sources and developed the following professional opinion:

• Per the risk criteria defined in Section 1.3, HDR identified seven High Risk sites, nine Moderate

Risk sites, and five Low Risk sites, based on factors such as regulatory history, status of documented releases, and proximity to the Study Area. HDR considers the seven high-risk sites as RECs that would require Phase II sampling and reporting to evaluate the potential of these sites to impact the project via the presence or potential presence of contaminants in soil and/or groundwater.

Conclusions

HDR has performed a LERR in conformance with the scope and limitations of outlined in our Scope of Services, dated January 15, 2019. Based upon the above-detailed Findings and Opinions, HDR concludes that 7 RECs have been identified within or adjacent to the Study Area. Any exceptions to or deletions from these practices are described in previous sections of this report.

Recommendations

Recommendations included in this report were developed through the investigative procedures described in the Scope of Services, Significant Assumptions, and Limitations sections of this report. These findings should be reviewed within the context of the limitations provided in the Limitations section.

Based upon the identified RECs for the Study Area, HDR makes following recommendations:

Recommendation 1

HDR recommends that the client consider the "shelf life" of Phase I documents in determining risk. ASTM E 1527-13: 4.6 states that a conforming "Phase I" report is valid for a period of 180 days and may be updated during the 180 days to 1-year timeframe. The report is valid for use in any of the CERCLA defenses only if it is updated within this time frame. If greater than one year passes from the final report date, the Phase I effort would need to be repeated to remain in compliance with ASTM and the "All Appropriate Inquiry" (AAI) protection.

Recommendation 2

HDR recommends that the client conduct Phase II site investigations for each of the 7 high-risk sites recommended for Phase II site investigations, as listed in Table 2, to evaluate the extent and severity of potential impacts from these sites.

Recommendation 3

HDR recommends that construction contractors be instructed to immediately stop subsurface activities if potentially hazardous materials are encountered, a non-natural odor is identified, or significantly stained soil is visible. Contractors should be instructed to follow applicable regulations regarding discovery and response for hazardous materials encountered during the construction process.

This page intentionally left blank.

1.0 Introduction

1.1 Purpose

The purpose of this LERR was to identify Recognized Environmental Conditions (RECs) that may adversely affect the Study Area, if present. This LERR was conducted in accordance with the scope and limitations outlined in our Scope of Services, dated January 15, 2019, and generally followed the standard of care of the ASTM International (ASTM) Practice E 1527-13. Although similar to an ASTM 1527-13 compliant Phase I Environmental Site Assessment, it does not qualify the user for "All Appropriate Inquiry" protections. For the purpose of this LERR, recognized environmental conditions (RECs) are defined as follows:

REC:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions (see definition below).

ASTM E 1527-13 defines release as a *release* of any *hazardous substance* or *petroleum product* shall have the same meaning as the definition of "release" in CERCLA 42 U.S.C. § 9601(22)).

Historical REC (HREC):

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Controlled REC (CREC):

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Additional conditions that are <u>not</u> included under the definitions of a REC, but are defined by ASTM Practice 1527-13 include:

De minimis:

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

Business Environmental Risk:

A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

1.2 Report Users

HDR received authorization from the Charleston County Public Works Department to conduct this LERR. This LERR has been prepared for the Charleston County Public Works Department (County), and only the County and its funding partner (Town of Mount Pleasant [Town]) have the right to rely on the contents of this report.

1.3 Scope of Services, Significant Assumptions, and Limitations

The services provided for this LERR consisted of the following:

- Describe of the Study Area including current land uses (Sections 2.1, 2.2 and 2.3).
- Describe of the topography, soils, geology, and groundwater flow direction (Section 2.4).
- Summarize user provided information (Section 3.0)
- Review reasonably ascertainable regulatory information published by federal, state, local, tribal, health, and/or environmental agencies pertaining to the Study Area (**Sections 4.0** and **4.1**).
- Review historical data sources for the Study Area, including aerial photographs, topographic maps, fire insurance maps, city directories, and other readily available development data (**Section 4.2**.
- Evaluate Environmental Liens, Activity Use Limitations (AULs) and Additional Information (Section 4.3)
- Interview current owners of properties within the Study Area or other persons with knowledge of the development history of the Study Area (**Section 4.4**).
- Review existing and readily-available environmental reports pertaining to the Study Area (Section 4.5).
- Conduct a field reconnaissance of the Study Area including a visual review of adjoining properties

 with a focus on indications of hazardous substances, petroleum products, polychlorinated biphenyls (PCBs), wells, storage tanks, solid waste disposal pits and sumps, and utilities (Section 4.6).
- Evaluate data gaps in the information obtained and comment on their significance in identifying RECs for the Study Area (Section 5.0).
- Prepare a written report of findings, opinions, and conclusions (Section 6.0).

The goal of this scope of services is to assist the user in identifying conditions in the Study Area that may indicate risks regarding hazardous materials storage, disposal, or other impacts that could affect construction of the project. Investigative areas not included in this scope include: asbestos, lead-based paint, lead in drinking water, radon or urea formaldehyde, wetlands, regulatory compliance, cultural and

2

historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and high voltage power lines.

The potential for vapor encroachment or intrusion into structures in the Study Area are considered and identified from on-site or off-site sources based on the experience of the Environmental Professional. State and national policies and standards relevant to vapor intrusion are in flux and subject to change.

The scope of services for this LERR also does not include the completion of soil borings, the installation of groundwater monitoring wells, or the collection of soil or groundwater samples.

HDR has made certain assumptions in preparing the scope of this assessment:

- Data gathered from public information sources (i.e., libraries or public regulatory agencies) are accurate and reliable.
- Site operations reflect site conditions relative to potential releases and no intentional concealment of environmental conditions or releases has occurred.
- Interview information is directly reported as gathered by the assessor and is limited by the accuracy of the interviewee's recollection and experience.
- Published geologic information and site observations made by the environmental professional are
 used to estimate likely contaminant migration pathways in the subsurface. These estimates by the
 environmental professional are limited in accuracy and are generally cross-referenced with existing
 information about similar sites and environmental releases in the area.
- Regulatory information is limited to sites identified after the late 1980s because reliable records were not kept by regulatory agencies prior to that time frame.

The findings and conclusions presented in this report are based on informal discussions with various agencies, a review of the available literature cited in this report, conditions noted at the time of this LERR, and HDR's interpretation of the information obtained as part of this LERR. The findings and conclusions are limited to the specific elements of investigation described in this report, and by the accuracy and completeness of the information provided by others.

A LERR cannot entirely eliminate uncertainty regarding the potential for RECs. Conducting this assessment is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with the Study Area within reasonable limits of time and cost. In conducting its services, HDR used a degree of care and skill ordinarily exercised under similar circumstances by reputable members of its profession practicing in the same locality. This LERR generally conforms to the level of documentation required in ASTM Practice E 1527-13. HDR may omit discussion of certain records deemed to be inapplicable or of limited value to the specific needs of the County. However, if the lack of available documentation results in a data gap, this data gap is identified herein, and its significance is discussed.

HDR used a relative risk ranking system to simplify risk evaluation of the 5 RECs provided in the LERR **Table 2** and to provide criteria for determining the need for further investigation. A relative risk level has been assigned to each site by HDR's qualified assessor, using a qualitatively assigned ranking, from low risk to high risk. The client may choose to investigate (or not investigate) any site within the Study Area, regardless of the reported risk ranking, based on such issues as the distance between the environmental records search buffer zone and the identified environmental condition on the ranked site. The criteria for each of the risk levels has been established by SCDHEC and are as follows:

Low Risk. This designation applies to sites that have few indications of the potential for the release of hazardous materials. On some occasions, sites that have had a hazardous materials issue in the past, but have been remediated with the approval of the state environmental agency or the U.S. Environmental Protection Agency (EPA), may qualify as low-risk. Examples of low-risk sites include undeveloped or agricultural properties, residential properties, or benign commercial properties such as office buildings, banks, or theaters.

Moderate Risk. This designation applies to sites that have some indications of possible hazardous materials issues. A moderate-risk site may appear on a database list as having a permit to handle hazardous materials, but has recorded no violations to date. Additionally, a site could be interpreted as a moderate risk if the records search found no listing, but the site's operations and appearance may indicate a hazardous materials concern, such as an auto-repair facility with visible surface staining. Examples of moderate-risk sites include auto-repair garages, welding shops, or vacant manufacturing facilities with no listing in the environmental database report.

High Risk. This designation applies to sites that have a high potential for releasing hazardous materials to the soil or groundwater, or have a recorded release issue. Examples of high-risk sites include current service stations, violation sites listed in the environmental database report, or sites with known release incidents (such as the site of a train derailment with an associated hazardous materials release).

A high-risk designation indicates that intrusive sampling and subsequent investigation is appropriate. A high-risk designation may be applied to any site within the Study Area, regardless of facility type, if the site inspection by HDR indicates that substantial risk is present. Examples of high risk sites include: operating UST sites, known LUST or release cases, manufacturing plants, former service stations that recently closed, pesticide batching plants, and vehicle accident or train derailment sites with a recorded hazardous materials release.

When HDR assigns a risk ranking to a site, the risk ranking criteria are reviewed and concurred with by at least one environmental professional. It is HDR policy to have subjective criteria cross-reviewed for accuracy and adherence to its assessment protocols and internal quality assurance standards. It is worthwhile to note that risk ranking does not directly correspond to whether a site qualifies as a REC; rather, the risk ranking system is intended as a method of categorizing sites on large study areas for consideration of common contamination characteristics.

2.0 Site Description

2.1 Location and Legal Description

The Study Area consists of the following:

- Approximately 4.6-miles of SC 41 from US 17 in Mount Pleasant in Charleston County, to Clements Ferry Road in Berkeley County.
- A portion of US 17 from the intersection with Hamlin Road to the entrance to Oakland Plantation.
- A proposed connector road from SC 41 to Park West Boulevard, immediately west of Laurel Hill County Park, encompassing the Phillips Community between Bessemer Road and Dunes West Boulevard east of SC 41 (Figure 1).

The proposed roadway improvements will be primarily located within the roadway ROW, and complete or partial ROW acquisitions are anticipated at this time. The land uses within the immediate vicinity of the Study Area include incorporated areas, vacant/undeveloped areas, estuarine and marine wetlands and deepwater, freshwater wetlands, residential, commercial, industrial, public/institutional, and parks/recreation/open space.

2.2 Site and Vicinity Characteristics

The United States Geological Survey (USGS) 7.5-minute Cainhoy and Fort Moultrie quadrangle maps for Berkeley and Charleston Counties, South Carolina indicate that elevation within the Study Area is between 3 and 75 feet. Lower elevations are generally located near marsh areas, while the 75-foot elevation is located within Laurel Hill County Park near SC 41.

The Study Area is moderately developed, with first-, second-, and third-generation residential, commercial, and public-use development. The Town of Mount Pleasant has been inhabited for several hundred years, and the area has seen several population booms. The central portion of the Project, specifically the Phillips Community, was established by freedmen in the 1870s on what was once Phillips and Laurel Hill plantations. Most who built homes there had been slaves prior to the Civil War, yet reached independence as tradesmen, businessmen, farmers, and landowners. Today, many residents are descendants of these original freedmen. Modern development of the Study Area began in the 1920s with the construction of US 17, and in the 1930s with the construction of SC 41. Commercial development is most common on the southern portion of the Study Area, and residential development is most common in the central and northern portions of the Study Area.

2.3 Description of Structures, Roads, and Other Site Improvements

The Study Area is located east of SC 41, extending roughly from Dunes West Boulevard to Bessemer Boulevard. The majority of land within the Study Area is occupied by residential roads and structures. To a lesser extent, portions of the Study Area are treed, including the western extent of Laurel Hill County Park. The Wando River is the dominant water feature, but the Study Area also includes several areas of wetlands, largely associated with crossings over Horlbeck, Mill, and Wagner Creeks. Given the moderately-dense residential development, multiple utilities, both underground and aboveground, are present.

2.4 Area Geology and Hydrogeology

The Study Area is located within the Atlantic Plain (Coastal Plain Province) physiographic region. Surface geology within the Study Area consists of Pleistocene and Holocene sediments. Pleistocene sediments consist of recent fluvial sands, backbarrier muds (i.e., marsh), and barrier beach sands. Holocene sediments constitute a 5-meter to 10-meter thick blanket of unconsolidated Quaternary marine and fluvial deposits, which lie on semi-lithified Tertiary sediments. The oldest beach deposits are farthest inland and at the highest elevations; younger beach deposits are progressively closer to the ocean and at lower elevations. Alfisols and Entisols are the dominant soil orders within the Study Area. These soils are very deep, clayey, or loamy, with "restricted drainage."

Groundwater in the area is generally shallow, at a depth of less than 5 feet below ground surface (bgs). Drinking water in the region is pumped from the Middendorf Aquifer at depths of 1,800-2,000 feet bgs. Localized groundwater flow is mainly toward the west-northwest, in the direction of the Wando River system. Regional groundwater flow is eastward toward the Atlantic Ocean.

Northern portions of the Study Area are located within the limits of a 100-year flood zone, according to FEMA flood plain mapping.

3.0 User Provided Information

The user of the report provided HDR with maps of the Study Area, and utility maps to denote locations of possible subsurface utilities.

No additional information was provided.

4.0 Records Review

EDR was contracted by HDR to complete a database search of federal, state, local, and tribal environmental record listings, as defined by ASTM E 1527-13, for the Study Area on March 4, 2019 (ERIS, 2019); the database search was updated (by repeating the same parameters) on January 5, 2022 (EDR, 2022). The results of the database search are summarized in **Table 2** and the following paragraphs. Only those databases that list sites with the potential to materially affect subsurface conditions are included. A complete copy of the EDR database report and detailed maps are included in **Appendix A**.

	EDR Historical I	Records			
EDR Hist Auto	EDR Exclusive Historical Auto Stations: EDR searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR Classifies as "High Risk Historical Records" (HRHR). EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns but may not show up in current government record searches.	O	0	7	1
EDR Hist Cleaner	searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry, etc. This database falls within a category of information EDR Classifies as "High Risk Historical Records" (HRHR). EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government record searches.	0	0	1	0
RGA HWS	Recovered Government Archive State Hazardous Waste Facilities List: The EDR RGA HWS database provides a list of SHWS incidents derived from historical databases that includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Health and Environmental Control in South Carolina.	0	0	2	0
RGA LUST	Recovered Government Archive Leaking Underground Storage Tank: The EDR RGA LUST database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from	0	0	14	4

Acronyms used in this table are defined in the EDR Report found in Appendix A

A total of 160 listings were identified within the ASTM-defined search buffer in the EDR database report. The EDR database report noted that 24 of these listings are within the Study Area. The following locations were considered sites of potential concern to the Study Area, based on location, distance, or regulatory status and are shown on **Figure 2**.

Pelican Cleaners – 2700 N. Highway 17, Suite 230: was listed in the EDR Hist Cleaner as Pelican Cleaners from 2005 to 2011.

A B McConnell – 2726 Hwy 17 N: was listed in the FINDS, RGA LUST, LUST, UST, RCR, GWCI, and Financial Assurance databases. The property was listed as A B McConnell from 1996 through 2012 in the RGA LUST database. One 550-gallon kerosene UST was removed on September 1, 1993. One 1,000-gallon gasoline UST and one 2,000-gallon gasoline UST were removed on September 2, 1995. The property was listed in the LUST database for a UST leak of unknown capacity or product on June 30, 1993, with documented closure (Notice of No Further Action [NFA]) on November 16, 1995. The property was listed in the RCR, GWCI, and Financial Assurance databases due to groundwater contamination and remediation due to the LUST incident. The property was listed in the RGA LUST database as A B McConnell from 1996 through 2012.

Gregorie Ferry Tract – 2972 N Hwy 17: was listed in the SHWS, VCP, Brownfields, and ASBESTOS databases. The EDR database listed a Project Complete Date of December 3, 2015, for the VCP and Brownfields, with no land use restrictions recorded.

Circle K 2720873/Pantry Inc./Exxon Service Station – 2846 Hwy 17 N: was listed in the LUST, UST, RCR, GWCI, Financial Assurance, SPILLS, EDR Hist Auto, and RGA LUST databases.

- Circle K was listed in the UST database for five registered USTs (three 10,000-gallon gasoline, one 6,000-gallon kerosene, and one 20,000-gallon diesel) currently located onsite and one 2,000-gallon kerosene tank, which was removed on January 27, 1997. The property was listed in the LUST database for a leak of an unspecified petroleum product on December 27, 1989, with documented NFA letter received on June 21, 2006. The property was listed in the RCR, GWCI, and Financial Assurance databases due to remediation associated with the LUST incident.
- Exxon Service Station was listed in the SPILLS database for approximately 20 gallons of gasoline spilled on April 13, 2003. No further information was provided.
- Pantry Inc. was listed in the EDR Hist Auto database as Pantry Inc. from 2004 through 2014.
- The property was listed in the RGA LUST database as Food Mart #1 in 1992, Gregorie's Food Mart #1 from 1993 to 1996, Pantry #873 from 1997 to 2012.

Former Fuels Bulk Plant/F Gregorie & Son Inc./Suburban Fuels, Inc. – 1131 Hwy 41: was listed in the UST, LUST, Financial Assurance, RGA LUST, GWCI, EDR Hist Auto, FINDS and AST databases.

- Former Fuels Bulk Plant was listed in the UST database for one 4,000-gallon gasoline tank, which was removed on August 1, 1984. Petroleum products were detected in groundwater at the site of the 4,000-gallon gasoline UST, which was reported to the South Carolina Department of Health and Environmental Control (SCDHEC) on November 5, 2007, resulting in the LUST database listing for Former Fuels Bulk Plant. Cleanup was initiated on November 14, 2007, and no further updates were listed. Former Fuels Bulk Plant was listed in the Financial Assurance and GWCI databases for cleanup associated with the LUST incident. The property was listed as Former Fuels Bulk Plant in the RGA LUST database from 2008 through 2012.
- F. Gregorie & Son was listed in the UST database for a 2,000-gallon diesel tank that was removed on an unknown date. F. Gregory and Son Inc. was listed in the EDR Hist Auto database as F. Gregory and Son Inc. in 1990, G F M Inc. in 1992, Fuel Express of Mt. Pleasant from 1994 through 2008, and Jacksons Garage Inc. in 2014. F. Gregorie & Son was listed in the FINDS database for the 2,000-gallon diesel tank.
- Suburban Fuels Inc. was listed in the AST database for ten tanks with capacity less than 250 gallons, one 1,001-2,000-gallon tank, and four 10,001-42,000-gallon tanks.

7-Eleven 40510 – 2978 Hwy 17N: was listed in the UST and Financial Assurance database. Two 20,000-gallon gasoline USTs, one 20,000-gallon petroleum UST, and one 12,000-gallon gasoline UST were reported in use at the property. The property was also listed in the Financial Assurance database, but no further information was provided.

Fuel Express of Mt. Pleasant – 3044 Hwy 41: was listed in the EDR Hist Auto database as Fuel Express of Mt. Pleasant from 2010 to 2013.

Refuel 15 – 3050 Ironclad Alley: was listed in the UST and Financial Assurance databases. The property was listed in the UST database for a 20,000-gallon gasoline UST and a 20,000-gallon multiple petroleum UST located onsite. The basis for the Financial Assurance was not listed but had expired on May 1, 2021.

Circle K 2723850 – 4020 Bessemer Road: was listed in the UST and Financial Assurance database. The property was listed in the UST database for a 20,000-gallon gasoline UST and a 20,000-gallon multiple petroleum UST located onsite. The basis for the Financial Assurance was not listed but had expired on August 24, 2021.

Tack Oil – 3001 Park West Boulevard: was listed in the SPILLS database. According to the EDR report, a release of an unknown quantity of tack oil was reported to SCDHEC on May 24, 2018. Further information could not be found regarding Incident #201802272.

Harris Teeter – 131 – 2035 Hwy 41: was listed in the UST, Financial Assurance, and AIRS databases. One 28,000-gallon petroleum UST and one 18,000-gallon petroleum UST were reported as in service June 8, 2021. No releases were reported with either UST. The property was also listed in the Financial Assurance database and AIRS database, but no further information was provided.

Lowes Fuel Center Mt. Pleasant – 2110 Hwy 41: was listed in the UST and Financial Assurance databases. One 20,000-gallon gasoline UST and one 26,000-gallon petroleum UST were reported in use at the property. No releases were reported with either UST. The property was also listed in the Financial Assurance database, but no further information was provided.

Detyens Shipyards Inc. – 2383 Hwy 41: was listed in the AST, ICIS, FINDS, and ECHO databases. The property was listed in the AST database for three less than 250-gallon ASTs, nine 2,001-10,000-gallon ASTs, and eight 10,001-42,000-gallon ASTs. Records indicate that small spills (under 10 gallons) of fuels and lubricants have occurred over the past 20+ years. All spills were cleaned up at the time of the spill, and no open remediation cases were listed for the site.

O'Hare Point – 546 Riverbend Trail: was listed in the SHWS, VCP, and Brownfields databases. The VCP and Brownfields file was opened on April 1, 2020. No further information was provided.

Circle K – 2720879/Gregorie's Food Mart #8/Pantry #879 – 2390 Hwy 41: was listed in the UST, LUST, Financial Assurance, and RGA LUST databases.

- Circle K was listed in the UST database for three 10,000-gallon gasoline USTs removed on January 20, 2015. One UST of unknown capacity and unspecified petroleum product was reported to be leaking on November 6, 1991, with documented case closure (NFA) occurring on March 10, 2003. A second UST of unknown capacity and unspecified petroleum product was reported to be leaking on March 10, 2015, with a NFA letter received on January 10, 2018. The property was also listed in the Financial Assurance database, but no further information was provided. The entire site has been decommissioned as part of the newly expanded Wando River Bridge.
- The property was listed as Gregorie's Food Mart #8 from 1992 to 1996 and as Pantry #879 in 1997.

Pantry 879 – 2391 Hwy 41: was listed in the FINDS, EDR Hist Auto, and RGA LUST databases. The property was listed in the FINDS database for an underground storage tank. The property was listed in the EDR Hist Auto database as a convenience store from 2004 through 2014. The property was listed in the RGA LUST database in 1998 through 2000 and 2002 through 2012. No further information was provided.

Wando Lounge (North) – 2601 Hwy 41: was listed in the LUST, UST, RCR, and RGA LUST databases. The property was listed in the LUST database for release of unspecified petroleum product on November 24, 1999, with documented case closure (NFA) occurring on June 12, 2012. The property was listed in the RGA LUST database as Wando Lounge from 2009 to 2012.

Wando Lounge – 2604 Hwy 41: was listed in the FINDS database for a LUST incident reported on April 2, 2010. No further information was provided.

Spinx 341 – 2627 Hwy 41: was listed in the UST and Financial Assurance databases. The property was listed in the UST database for a 30,000-gallon multiple petroleum UST, a 32,000-gallon multiple petroleum UST, and a 28,000-gallon multiple petroleum UST located onsite. The basis for the Financial Assurance was not listed but had expired on May 1, 2021.

Additionally, 39 unplottable sites were identified in the EDR database report. The majority of these sites were not of concern to the Study Area based on factors such as duplication of reporting (i.e., Detyens Shipyard), distance from the Study Area, and/or hydraulic gradient.

4.1 Additional Regulatory Information

Online SCDHEC databases (AST and UST Registries, State Cleanup Program, Voluntary Remediation Program, and Superfund Sites in South Carolina) were reviewed to supplement the data provided by EDR. Additional findings for ASTs and USTs were noted and discussed in **Section 4.0**.

4.2 Historical Use Information

The objective of reviewing historical use information is to develop a history of previous land uses in the vicinity of the Study Area. This information was used to assess the previous land uses for potential hazardous materials impacts that may affect the Study Area. HDR reviewed those historical sources that were reasonably ascertainable and likely to provide useful information, as defined by the ASTM standard.

4.2.1 Fire Insurance Maps

A Sanborn Fire Insurance Map (**Appendix B**) search was conducted by EDR; however, the Study Area was listed as unmapped. Therefore, no Sanborn Fire Insurance maps were available.

4.2.2 City Directory Information

A city directory search was conducted by EDR. The city directories were useful in identifying sites that had been service stations (USTs/ASTs) or dry cleaners over an approximately 50-year period. Many facilities no longer exist, have changed to another business use, or operate under different names at the same address. City Directories were searched for listings on Highway 41 and Bessemer Road for the years 1992, 1995, 2000, 2005, 2010, 2014, and 2017. Readily identifiable non-residential listings are presented in **Table 3**. The City Directory Search is included as **Appendix C**.

Table 3. City Directory Results

Address	Commercial/Industrial Listing	Years Listed			
	Highway 41				
	3D Optometry	2010, 2014, 2017

According to the city directories, properties located along Highway 41 in the vicinity of the Study Area have been mixed use residential and commercial since at least the early 1990s. A review of nearby addresses noted the following businesses that had the potential to store or use hazardous waste onsite:

- Michael's Cleaners (1055)
- Gregorie F & Son/Fuel Express South/Suburban Fuels Oil Division/Palmetto RV/Recycle Motorcycle, LLC (1131)
- Charleston Steel & Metal Company (1132)
- Custom Equipment Co./ Lawson Construction/Beacon Plumbing (1145)
- Top Gun Inc./Buckhorn Indoor Range/Mount Pleasant Auto Service Center/Bulls Bay Marine/The Cart Shop LLC/Penske Truck Rental/Crenshaw Golf Carts (1161)
- Sherwin-Williams (1178)
- Coaxum Stucco Company (1564)
- Re Masters of Construction (1608)
- Blake Adams Siding (1651)
- Atlantic First General Contractor (1901)
- Julius Alterations & Cleaners (2031)
- Republic Contracting (2201 and 2257)
- AVSCO Fire & Safety/Carolina Boatyard/Detyens Shipyards Inc./Waterway Transport LLC (2383)
- Atlantic Marine, Inc. (2386)
- Texaco Food Mart #8/ Olan Construction/ Pantry 879 (2390)
- Kangaroo Express/Pantry 879 (2391)

A review of nearby addresses along US 17 (conducted during the 2019 LERR) noted the following businesses that had the potential to store or use hazardous waste onsite: Mafhburn Construction Co (2700), Pelican Cleaners at Brickyard/H Coastal Body (2700), Kangaroo Express (2846), Andrews Construction Services (2906), Seel's Outboard (2910), Guy C Lee Building Materials (2985), Sisson Scale & Equipment CO (3018), Danaher Construction Service (3040), and Fuel Express South/Suburban Fuels (3044).

4.2.3 Tax Map

Property tax maps were not reviewed for the Study Area.

4.2.4 Historical Aerial Photographs

Historical aerial photographs are valuable for the Environmental Professional to review features of the Study Area and surrounding properties over an extended period. HDR reviewed historical aerial photographs (**Appendix D**) for the following years: 1941, 1953/1954, 1961, 1968, 1973, 1983, 1989, 1994/1995, 1999/2000, 2006, 2009, 2013, and 2017.

1941-1958: In 1941, the Study Area was primarily undeveloped or residential. SC 41 existed

as a two-lane roadway, following a similar path to its present-day route. Much of the immediate area was also residential or undeveloped along the Wando River and the surrounding community, and similar development continued through the late 1950s. The Phillips community was present along SC-41 with increased residential and commercial development on the southern portion of SC-41 at the

intersection of US 17.

1961-1973: The Study Area and surrounding area were relatively unchanged, with the

exception of marina development in the far northern portion of the Study Area, and additional homes located north of the Wando River Bridge. Additional residential development was visible at the southern extent of the Study Area, along US 17. Additional residential development had occurred in the central portion of the Study Area. Transmission lines to the west were installed in the early 1970s. Additional cross streets and residential roadways had been

constructed throughout the surrounding community.

<u>1983-1989</u>: Additional residential development and infrastructure in the form of transmission

lines and cross streets were depicted throughout the Study Area. Development had occurred at the current location of Republic Contracting, in the northwest portion of the site south of the Detyens Marina. The local airfield located east of

the Study Area was under construction.

1994/1995-1999: Residential development had increased significantly since the 1989 aerial

photograph. Numerous residential developments were located in the central portion, and just beyond the north and southwest portions, of the Study Area.

Additional commercial development had occurred along US 17.

2006-2017: The Study Area generally appeared as it does today with heavy commercial

businesses located along US 17, a marina located on the Wando River, and residential and wooded/undeveloped properties located throughout the Study Area. Several residential communities containing golf courses and supporting structures were visible. Commercial businesses were located along US 17, especially at the intersection of US 17 and SC 41. Schools, substations, and other commercial and residential development had occurred throughout the

surrounding community.

4.2.5 Historical Topographic Maps

Historic topographic maps provide an overview of the Study Area relative to potential previous land uses. HDR reviewed historical topographic maps of the Study Area and surrounding area. The USGS 7.5-minute series maps for Wando, Fort Moultrie, and Cainhoy (1919, 1943, 1958/1959, 1971, 1979, 2014, 2017, and 2020) are summarized below. The USGS 15-minute series map for Charleston (1988) was also reviewed. Copies of topographic maps provided by EDR are included in **Appendix E**.

<u>1919</u>: The northern section of the Study Area was undeveloped, and no bridges had

been constructed across the Wando River. The middle section of the Study Area indicated residential development. Southern portions of the Study Area, along

present-day US 17, also indicated residential development. The majority of the

Study Area was undeveloped or wetlands.

1943: Much of the central portions of the Study Area had been developed for residential

purposes, and a marina was located on the Wando River, west of the Study Area. Additionally, the Wando River Bridge had been constructed to provide overland access to Wando from Mount Pleasant. Significant development was shown in the southern portion of the Study Area, near the intersection of SC 41

and US 17.

1958/1959: The map is similar to the 1943 map, with mostly residences and a school located

along SC 41. Some wetlands and undeveloped forested areas remained

throughout the surrounding community.

1971-1988: Residential developments and cross streets increased in the central portions of

the Study Area. Businesses were located at the intersection of SC 41 and US 17, with much of the immediate surrounding area still dominated by forested land.

2014-2020: The Study Area appeared similar to current conditions. The 2014, 2017, and

2020 maps do not show structures.

4.3 Environmental Liens, Activity Use Limitations (AULs) and Additional Information

An environmental lien search was not conducted as part of this LERR.

4.4 Interviews

4.4.1 Onsite Interviews

No onsite interviews were performed for the Study Area, per the scope of work of the project, and client direction.

4.4.2 Offsite Interviews

No offsite interviews were performed for the Study Area, per the scope of work of the project, and client direction.

4.5 Previous Environmental Reports

4.5.1 Phase II Limited Subsurface Assessments (2005)

HDR obtained and reviewed the "Phase II Limited Subsurface Assessments – Pantry #879 / Detyen's Shipyard / Wando Grocery / SCDOT Section Shed / Cohen Gaskins Jr. Property" (Phase II Report) dated June 30, 2005, during completion of this LERR. A summary of the report is provided below, as it pertains to the Study Area that is the subject of this LERR. A copy of the Phase II Report is provided in **Appendix F**.

23

- Pantry #879, as reported in the Phase II Report corresponds to the "Circle K #2720879 / The Pantry #878/879 (Site Q herein)" discussed in this LERR. ARM Environmental Services, Inc. (ARM) advanced 8 soil borings at the Pantry #879 site in June 2005. Soil samples were collected from each boring at two-foot intervals and field-screened for presence of volatile organic compounds (VOCs) using an organic vapor analyzer (OVA). The sample (SB-6) exhibiting the highest OVA reading was submitted to a SC-certified laboratory for analysis of VOCs. Several petroleum constituents were reported in soil sample SB-6 at concentrations below the SCDHEC Risk Based Screening Levels (RBSLs) for Dermal Contact/Ingestion and the USEPA Residential Preliminary Remediation Goals (PRGs). The SB-6 location was adjacent to the on-site building, down-gradient of the UST basin, and not likely to be disturbed during the currently proposed roadway project. Borings advanced closer to SC 41 exhibited OVA readings above background, indicating the presence of some residual contamination in shallow soils, but samples were not obtained for laboratory analysis from these borings.
- Detyen's Shipyard (Site P herein) was assessed in 2005 via advancement of 3 soil borings, field-screening of soil samples at two-foot intervals in each boring, and laboratory analysis of one soil sample (SB-10) for VOCs. Field-screening measurements were marginally above background concentrations and only a few constituents were detected above the laboratory reporting limit in soil sample SB-10. No constituent concentrations exceeded regulatory criteria.
- Wando Grocery (Site S herein) was assessed in 2005 via advancement of 4 soil borings, field-screening of soil samples at two-foot intervals in each boring, and laboratory analysis of one soil sample (SB-12) for VOCs. Per the field-screening measurements, all 4 borings advanced along the SC41 right-of-way were impacted by petroleum contaminants. ARM reported that the concentrations of constituents reported in soil sample SB-12 were sufficiently high to likely have impacted groundwater, although no groundwater samples were collected during the 2005 assessment. ARM estimated that contaminated groundwater could be encountered less than 4 feet below ground surface.
- Cohen Gaskins Jr. Property, as reported in the Phase II Report appears to correspond to the "Spinx (Site T herein)" site discussed in this LERR. ARM advanced 4 soil borings at the Cohen property in June 2005. Soil samples were collected from each boring at two-foot intervals and field-screened for presence of VOCs using an OVA. The sample (SB-19) exhibiting the highest OVA reading was submitted to a SC-certified laboratory for analysis of VOCs. Multiple petroleum constituents were reported in soil sample SB-19 at concentrations well above the laboratory reporting limit, but below the SCDHEC RBSLs for Dermal Contact/Ingestion and the USEPA Residential PRGs. The SB-19 location was adjacent to SC41. ARM stated that shallow soils "have been adversely impacted by high concentrations of petroleum-based contamination" and "other non-petroleum contaminants". Further, "documented ground water contamination exists on the site and there is a high potential for encountering contaminated soil and/or ground water during any planned excavation activities."
- The fifth site (Former SCDOT Wando Section Shed) assessed by ARM was not identified on the EDR database report obtained by HDR for this LERR or identified during the site reconnaissance. Per the Phase II Report prepared by ARM, a UST release was reported at the site and a status of no further action (NFA) was issued in May 1990. No additional information was available as the SCDHEC file for this incident has since been purged.

4.6 Site Reconnaissance

On January 12, 2022, HDR conducted a reconnaissance of the Study Area and surrounding properties. SC 41, a two-lane north-south highway that connects Wando and Mount Pleasant, comprised the western boundary of the Study Area. In general, properties along SC 41 through this portion of the Study Area were occupied by single-family residences that date to the 1950s. Properties east of SC 41 are also predominantly residential, but date to the 1990s.

Commercial properties identified within or proximal to the Study Area during the site reconnaissance include:

- A B McConnell 2726 Hwy 17
- Advanced Auto Parts 2741 N. Hwy 17
- M.P. Laundromat 2755 N. Hwy 17
- Sunoco/7-Eleven 2978 N. Hwy 17
- Refuel 15 3050 Ironclad Alley
- Guy C. Lee Building Materials 2985 N. Hwy 17
- Mt. Pleasant Auto Repair 1157 SC 41
- Circle K #2723850 4020 Bessemer Road
- Mount Pleasant Waterworks SC 41
- Mount Pleasant Fire Station #5 3001 Dunes West Blvd
- Harris Teeter 131 Fuel 2035 SC 41
- Lowe's Fuel Center 2110 SC 41
- Boat storage and AST 2386 SC 41
- Detyens Shipyard 2383 SC 41
- Spinx Gas Station 2627 SC 41

Mount Pleasant Waterworks, Mount Pleasant Fire Station #5, Advanced Auto Parts, Spinx, Lowe's Fuel Center, Harris Teeter 131 Fuel, and Guy C Lee Building Materials were deemed to not pose significant environmental concern for the Study Area.

A B McConnell, M P Laundromat, Sunoco/7-Eleven, Refuel 15, Circle K #2723850, and Detyens Shipyard were identified as RECs. Conditions at other sites did not show evidence of a release of hazardous materials, and thus, these sites were not identified as RECs. Photographs taken during the site reconnaissance are provided in **Appendix G**.

5.0 Data Gap Analysis

Data gaps, including data failure, encountered during the investigative process that may affect the validity of the conclusions drawn by the environmental professional were evaluated in general accordance with ASTM standards. HDR also estimated the relative importance of the data gaps. Generally, gaps in available data are related to the availability of historical data sources for specific sites of concern. The environmental professional uses multiple historical data sources as a method to provide coverage for data gaps. Historical information is collected on a recurring basis, and the passage of time between data sets may or may not constitute a significant gap in data coverage. For this Study, the following items may constitute a data gap:

- Absence of fire insurance maps;
- Absence of environmental liens;
- · Absence of site-specific interviews; and
- Absence of aerial photography prior to 1941.

The inability to obtain and review the fire insurance and environmental lien information does not present a significant data gap, since adequate historical information from other sources was available and reviewed. The absence of site-specific interviews is not significant since adequate historical information is available for the Study Area. The lack of aerial photography prior to 1941 does not present a significant data gap due to the presence of other supporting historical information.

26

6.0 Findings, Opinions, and Conclusions

HDR previously conducted a LERR for an approximately 4.6-mile section of SC 41 from US 17 to Clements Ferry Road, located in Charleston and Berkeley Counties, South. Subsequent to completion of the 2017 LERR, the Study Area was expanded to include land east of SC 41 between Dunes West Boulevard and Bessemer Boulevard. Therefore, HDR conducted a supplemental LERR of the new portion of the Study Area (2019 Study Area) between Dunes West Boulevard and Bessemer Boulevard to identify high-risk properties with potential or existing environmental contamination. This LERR was completed for Charleston County Public Works Department.

6.1 Findings

General findings of this assessment include the following:

- The surrounding area consists of a mix of residential, commercial, and public land usage.
- Elevation within the 2022 Study Area ranges from approximately 3 to 75 feet. Groundwater is
 generally shallow, at a depth of less than 5 feet below ground surface, with deeper bedrock
 aquifers in the area reported between 1,800 to 2,000 feet deep in the Middendorf Aquifer. Local
 groundwater generally flows to Toomer or Horlbeck Creeks, which are tributaries to the Wando
 River. Regional groundwater flows east toward the Atlantic Ocean. Portions of the Study Area are
 located within the limits of a 100-year flood zone.
- Multiple sites of concern were identified in the EDR report. Site descriptions and regulatory listing information related to risk ranking determination are summarized in **Table 4**. Identified sites of concern include existing or former underground storage tank (UST)/aboveground storage tank (AST)/leaking underground storage tank (LUST) facilities, Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) facilities, and landfill sites. EDR proprietary records were used as additional information to augment other data source reviews.
- The EDR report identified 39 "orphan" listings (listings for sites with insufficient or conflicting address information, which renders the sites unmappable. HDR reviewed the "orphan" listings and found 14 these sites were located within the Study Area.
- On January 12, 2022, HDR conducted a field reconnaissance of the Study Area. Properties were primarily residential or undeveloped with limited commercial (e.g., gasoline and convenience stores, boat storage yard) development and public use properties.

Table 4. LERR Data Table - REC Findings and Phase II Recommendations

Map Code ⁽¹⁾	Site Name	Address	Site Operations Relative to Hazmat Issues, Regulatory Listing	Data Source ⁽²⁾	Risk Ranking L/M/H ⁽³⁾	Phase II Recommendation
A	Shopping plaza (formerly Pelican Cleaners)	2700 Hwy 17 N Mount Pleasant, SC 29464	Historic dry cleaners	D	M	No

- (1) Map Codes correspond to Figure 2, not the map codes listed in the EDR report in Appendix A.
- (2) Indicates primary information sources for listing: R=Reconnaissance, D=Database, H=Historical Source (fire insurance maps, historical aerial photographs, historical topographic maps)
- (3) Risk of potential impacts onsite; Low/Moderate/High

CORRIDOR IMPROVEMENTS

6.2 Opinions

HDR has reviewed the stated data sources and developed the following professional opinion:

Per the risk criteria defined in Section 1.3, HDR identified seven High Risk sites, nine Moderate Risk sites, and five Low Risk sites, based on factors such as regulatory history, status of documented releases, and proximity to the Study Area. HDR considers the seven high-risk sites as RECs that would require Phase II sampling and reporting to evaluate the potential of these sites to impact the project via the presence or potential presence of contaminants in soil and/or groundwater.

6.3 Conclusions

HDR has performed a LERR in conformance with the scope and limitations of outlined in our Scope of Services, dated January 15, 2019. Based upon the above-detailed Findings and Opinions, HDR concludes that 7 RECs have been identified within or adjacent to the Study Area. Any exceptions to or deletions from these practices are described in previous sections of this report.

7.0 Recommendations

Recommendations included in this report were developed through the investigative procedures described in the Scope of Services, Significant Assumptions, and Limitations sections of this report. These findings should be reviewed within the context of the limitations provided in the Limitations section.

Based upon the identified RECs for the Study Area, HDR makes following recommendations:

Recommendation 1

HDR recommends that the client consider the "shelf life" of Phase I documents in determining risk. ASTM E 1527-13: 4.6 states that a conforming "Phase I" report is valid for a period of 180 days and may be updated during the 180 days to 1-year timeframe. The report is valid for use in any of the CERCLA defenses only if it is updated within this time frame. If greater than one year passes from the final report date, the Phase I effort would need to be repeated to remain in compliance with ASTM and the "All Appropriate Inquiry" (AAI) protection.

Recommendation 2

HDR recommends that the client conduct Phase II site investigations for each of the 7 sites recommended for Phase II site investigations, as listed in LERR Data Table, to evaluate the extent and severity of potential impacts from these sites.

Recommendation 3

HDR recommends that construction contractors be instructed to immediately stop subsurface activities in the event that potentially hazardous materials are encountered, a non-natural odor is identified, or significantly stained soil is visible. Contractors should be instructed to follow applicable regulations regarding discovery and response for hazardous materials encountered during the construction process.

8.0 Qualifications of Environmental Professionals

8.1 Signature and Qualification

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in Section 312.10 of 40 Code of Federal Regulations [C.F.R.] Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Study Area.

Qualified Environmental Professional Mark Filardi, PG

8.1.1 Qualifications of Environmental Professional

This LERR was performed by the following HDR personnel:

Mr. Mark P. Filardi, PG is a senior geologist with over 20 years of experience in environmental site assessment and remediation. Mark currently serves as HDR's South Atlantic Area GeoEnvironmental Lead and is based in our Charlotte, North Carolina office. His team regularly supports the planning and implementation of contaminated site investigations; compliance monitoring; remediation of impacted soil, groundwater, surface water, and sediment; and hydrogeologic and water use characterization for municipal, power, and industrial/commercial clients throughout the Eastern and Midwestern United States. He has extensive experience supporting subsurface geological investigations, managing and conducting assessments in accordance with State-level clean-up programs (UST and DSCA); the USEPA's CCR Rule for coal combustion residuals; National Pollutant Discharge Elimination System (NPDES) permit sampling; and Phase I and II Environmental Site Assessments (ESAs).

SC-EFIS (South Carolina - Environmental Facility Information System) integrates information on environmental facilities, permits, violations, enforcement actions, and compliance activities needed to support regulatory requirements and target environmental quality improvements for the water, air, solid waste, and hazardous waste program areas. The EFIS was developed by the state of South Carolina and Maine joined their system in 2004.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System:

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

SC-EFIS (South Carolina - Environmental Facility Information System) integrates information on environmental facilities, permits, violations, enforcement actions, and compliance activities needed to support regulatory requirements and target environmental quality improvements for the water, air, solid waste, and hazardous waste program areas. The EFIS was developed by the state of South Carolina

and Maine joined their system in 2004.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR - NOT APPLICABLE

Environmental Interest/Information System:

SC-EFIS (South Carolina - Environmental Facility Information System) integrates information on environmental facilities, permits, violations, enforcement actions, and compliance activities needed to support regulatory requirements and target environmental quality improvements for the water, air, solid waste, and hazardous waste program areas. The EFIS was developed by the state of South Carolina and Maine joined their system in 2004.

Environmental Interest/Information System:

SC-EFIS (South Carolina - Environmental Facility Information System) integrates information on environmental facilities, permits, violations, enforcement actions, and compliance activities needed to support regulatory requirements and target environmental quality improvements for the water, air, solid waste, and hazardous waste program areas. The EFIS was developed by the state of South Carolina and Maine joined their system in 2004.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of

the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System:

SC-EFIS (South Carolina - Environmental Facility Information System) integrates information on environmental facilities, permits, violations, enforcement actions, and compliance activities needed to support regulatory requirements and target environmental quality improvements for the water, air, solid waste, and hazardous waste

program areas. The EFIS was developed by the state of South Carolina and Maine joined their system in 2004.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with

Direction Distance

Elevation Site Database(s) **EPA ID Number**

WANDO GROCERY (Continued)

1007246503

EDR ID Number

a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

SHWS: Site Assessment Section Project List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

AUL: Land Use Controls

The term Land Use Controls or "LUCs" encompass institutional controls, such as those involved in real estate interests, governmental permitting, zoning, public advisories, deed notices, and other legal restrictions. The term also includes restrictions on access, whether achieved by means of engineered barriers (e.g., fence or concrete pad) or by human means (e.g., the presence of security guards). Additionally, the term includes both affirmative measures to achieve the desired restrictions (e.g., night lighting of an area) and prohibitive directives (e.g., restrictions on certain types of wells for the duration of the corrective action). Considered altogether, the LUCs for a facility will provide a tool for how the property should be used in order to maintain the level of protectiveness that one or more corrective actions were designed to achieve.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

ALLSITES: Site Assessment & Remediation Public Record Database

The South Carolina Department of Health and Environmental Control is pleased to have the Public Record for your review. The purpose of this database is two-fold. First, it will provide to communities another form of notice of cleanup activity, allowing them to have more information about assessment and cleanup activities in their area and in the State. Second, it can assist those seeking to redevelop brownfield properties within South Carolina.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by HDR Engineering were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Brad street. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

1.0 Introduction

Pursuant to authorization received from Civil Engineering Consulting Services (CECS), Inc., ARM Environmental Services, Inc. (ARM) has conducted Phase II Limited Subsurface Assessments (LSA) of 5 sites along the SC-41 over Wando River Bridge Replacement Project Corridor, located in Charleston and Berkeley Counties, South Carolina. The Project Corridor consists of approximately 8,500 feet along SC-41, approximately 2,100 feet along S-33 (Clements Ferry Road) from SC-41, and 150 feet from the centerline of both roads, as indicated on the Project Corridor Location Map included in Appendix A.

Five sites were evaluated within the scope of these assessments including; 1) Pantry #879 site, located at 2391 SC-41, 2) Detyen's Shipyard site, located at 1670 Dry-dock Avenue, 3) Wando Grocery site, located at approximately 2560 SC-41, 4) Former SCDOT Section Shed site, located adjacent to SC-41, and 5) Cohen Gaskins Jr. Property site, located at the SC-41 / Clements Ferry Road intersection. These Phase II assessments are based on the results of the Hazardous Material / Waste Site Assessment report of the Project Corridor completed by ARM in April of 2005. The primary objective of this scope of services is to provide preliminary information regarding the presence of significant soil contamination at the sites of concern. The general site evaluation procedures conducted during the assessment are summarized below:

SCOPE OF WORK

- ARM installed 2-8 soil borings per site, advanced via a truck mounted Geoprobe 5400, to maximum approximate depths of 8 feet below ground surface (bgs), or until the upper surface of the water table was encountered, whichever was shallower. The borings were primarily located on the areas of the subject sites where potential excavation activities may occur, or throughout the site if the site was a potential acquisition. Soil samples were collected from each borehole at two-foot intervals and screened on-site for organic vapors, utilizing a portable organic vapor analyzer (OVA).
- The soil sample exhibiting the highest organic vapors from each site was field preserved and analyzed by a South Carolina certified laboratory for volatile organic compounds (VOCs). Subsequent to sampling, each boring was abandoned via pressure induced grout per South Carolina Well Standards.

• A written report (this document) detailing the findings of the LSAs was prepared.

2.0 Site Reports

Contained below are summaries of the results of the Phase II LSA work conducted at the referenced sites.

Site #1 - Pantry #879

Site Description

The Pantry #879 site is an active retail gas station located at 2391 SC-41. South Carolina Department of Health and Environmental Control (DHEC) file information indicates that the site is a leaking underground storage tank (LUST) site (DHEC ID# 13065). The site currently utilizes three 10,000 gallon gasoline underground storage tanks (USTs) and one 500 gallon kerosene above ground storage tank (AST) for petroleum product storage and retail distribution. The site is responsible for a fuel release that was reported to DHEC in November 1991. Twelve (12) monitoring wells, currently abandoned, were installed on the site to assess the nature and severity of the release. A no further action (NFA) status was issued for the site by DHEC in March 2003. The existence of the NFA status for the site indicates that based on the available assessment data, DHEC will not require any additional monitoring or remediation of the site to be completed for the referenced fuel release.

Limited Subsurface Assessment

Eight soil borings were installed at the site via a truck mounted Geoprobe 5400 on June 14, 2005. The soil boring locations were chosen in order to assess the entire Pantry #879 property. The soil borings were advanced to approximate total depths from four to six feet bgs, which was the approximate depth of the water table. The shallow subsurface soils consisted primarily of fine to medium grain sands and silty clays. The locations of the soil borings are indicated on the site plan included as Figure 2.

Soil samples were collected from each borehole at two-foot intervals, and were screened on-site for organic vapors with a portable OVA. OVA results for each screened interval are included below in Table 1. The soil sample, above the water table, that exhibited the highest OVA result (SB-6) was placed in appropriate laboratory provided containers. The sample containers were then placed on ice for transport to the laboratory. The soil samples were analyzed by a certified laboratory for VOCs utilizing EPA approved method 8260B. The positive laboratory analytical data is summarized below in Table 2. The Environmental Protection Agency (EPA) Region 9 Residential Preliminary Remediation Goals (PRGs) and the DHEC Dermal Contact / Ingestion Risk Based Screening Levels (RBSLs) for the positive contaminants are included for comparison. The PRGs were obtained from the EPA Region 9 Risk Based Concentration (RBC) Table, dated January 2005. The PRG table includes PRGs for residential and industrial soils for each chemical. For the purposes of this report, the more conservative (lower) residential PRG has been included. The complete laboratory analytical data is included in Appendix B.

2-Butanone (MEK)	N/A	22,000,000	7.2
Ethylbenzene	7,800,000	400,000	0.87

^{*}All results are expressed in ug/kg.

Site Summary and Conclusions

The Pantry #879 site has a history of documented soil and ground water contamination. NFA status has been issued by DHEC for the site; however, the results of the LSA indicate that the shallow soils at the site presently contain low concentrations of petroleum-based contamination. Additionally, low concentrations of acetone and methyl ethyl ketone (MEK) were identified on the site. Acetone and MEK are solvents which are commonly used in industrial coating and also as degreasers. The source of the acetone and MEK identified is unknown, but could be associated with the light industrial history of the Project Corridor area. The contaminant concentrations detected in the soils are considered relatively low and would not appear to represent gross soil contamination, or a significant risk for human exposure. Potential ground water impact from the presence of these contaminants can only be quantified with the collection and analysis of ground water samples. Additionally, it is suspected that the soil contaminants detected may potentially be present due to contact with contaminated ground water, which may vary in depth both seasonally and tidally. Based on the shallow nature of the soil contamination detected, and the relatively shallow water table (approximately 4 feet) at the site, there is a potential for encountering contaminated soils and/or ground water during any planned excavation activities at the site.

Also, it should be noted that if the site is to be acquired, UST removal and closure documentation per DHEC requirements would be necessary. A site location map and site plan for the site are included on the following pages as Figure 1 and Figure 2.

Site #2 - Detyen's Shipyard

Site Description

Detyen's Shipyard encompasses over fifty acres of land on the Wando River both in and adjacent to the Project Corridor. A variety of ship repairs appear to occur on the site including utilization of heavy equipment such as cranes, trucks, tractors, dry-docks, fully equipped workshops, and ASTs. An inquiry of standard incident reports provided through a National Response Center (NRC) website returned details regarding three fuel releases that occurred at/near the Detyen's site. Although detailed information regarding the fuel release incidents was not available, it appears likely that onsite boat and ship repair activities have adversely affected the environmental conditions of the Detyen's Shipyard site.

Limited Subsurface Assessment

Three soil borings were installed at the site via a truck mounted Geoprobe 5400 on June 14, 2005. The soil boring locations were chosen in order to assess the proposed water main installation area at the Detyen's Shipyard site. The soil borings were advanced to approximate total depths from four to six feet bgs, which was the approximate depth of the shallow water table. The shallow subsurface soils consisted primarily of fine to medium grain sands and silty clays. The locations of the soil borings are indicated on the site plan included as Figure 4.

Soil samples were collected from each borehole at two-foot intervals. The soil samples were screened on-site for organic vapors with a portable OVA. Results for organic vapor analysis of each soil sample is included in Table 3. The soil sample above the water table that exhibited the highest OVA result (SB-10), was placed in appropriate laboratory provided containers. The sample containers were then placed on ice for transport to the laboratory. The soil samples were analyzed by a certified laboratory for VOCs utilizing EPA approved method 8260B. The positive laboratory analytical data is summarized below in Table 4. The EPA Region 9 Residential PRGs and the DHEC Dermal Contact / Ingestion RBSLs for the positive contaminants are included for comparison. The complete laboratory analytical data is included in Appendix B.

ARM ENVIRONMENTAL SERVICES, INC.

Chemical of Concern	DHEC Dermal Contact / Ingestion RBSL	EPA Residential PRG	SB-10 (2 ft)
Acetone	N/A	14,000,000	70
2-Butanone (MEK)	N/A	22,000,000	13
Carbon Disulfide	N/A	360,000	6.5
Ethylbenzene	7,800,000	400,000	0.41

^{*}All results are expressed in ug/kg.

Site Summary and Conclusions

The results of the LSA indicate that the shallow soils at the site have been impacted by relatively low concentrations of acetone, MEK, carbon disulfide, and ethylbenzene Based on the available information, the source of the identified contamination. contamination is unknown, but could be the result of the light industrial history of the Project Corridor area. The contamination detected in the soils at the Detyen's Shipyard site is considered relatively low and does not appear to represent gross soil contamination, or a significant risk for human exposure. Potential ground water impact from the presence of these contaminants can only be positively quantified with the collection and analysis of ground water samples. Additionally, it is suspected that the soil contaminants detected may potentially be present due to contact with contaminated ground water, which may vary slightly in depth seasonally and tidally. Based on the shallow nature of the soil contamination detected, and the relatively shallow water table (approximately 4 feet) at the site, there is a potential for encountering contaminated soils and/or ground water during any excavation activities on this portion of the site.

A site location map and site plan for the site are included on the following pages as Figure 3 and Figure 4.

Site #3 - Wando Grocery

Site Description

The Wando Grocery Site, a LUST site (DHEC ID #14035), formerly operated as a retail gas station and convenience store. The site is located at approximately 2560 SC-41 in the Project Corridor area. The Wando Grocery site is a former UST site and is responsible for a fuel release that was reported to DHEC in 1991. Five USTs have been removed from the site, including one 1,000 gallon, two 550 gallon, and one 6,000 gallon USTs. A UST regulatory file review was previously conducted for the site at the DHEC Freedom of Information (FOI) office in order to further evaluate the environmental conditions of the site. Review of the regulatory file indicated that all of the assessment work previously performed for the Wando Grocery site, was mistakenly performed at the Cohen Gaskins Jr. Property site (Site #5). As a result, no previous assessment information is available for the Wando Grocery site.

Limited Subsurface Assessment

Four soil borings were installed at the site via a truck mounted Geoprobe 5400 on June 14, 2005. The soil boring locations were chosen in order to assess the right of way area on the Wando Grocery site for a proposed water main installation. The soil borings were advanced to approximate total depths of four feet bgs, which was the approximate depth of the shallow water table. The shallow subsurface soils consisted primarily of fine to medium grain sands and silty clays. The locations of the soil borings are indicated on the site plan included as Figure 6.

Soil samples were collected from each borehole at two-foot intervals. The soil samples were screened on-site for organic vapors with a portable OVA. Results for organic vapor analysis of each soil sample are included in Table 5. The soil sample, above the water table, that exhibited the highest OVA result (SB-12) was placed in appropriate laboratory provided containers. The sample containers were then placed on ice for transport to the laboratory. The soil samples were analyzed by a certified laboratory for VOCs utilizing EPA approved method 8260B. The positive laboratory analytical data is summarized below in Table 6. The EPA Region 9 Residential PRGs and the DHEC Dermal Contact /

Page 12

	DHEC Dermal	EPA	05.40
Chemical of Concern	Contact / Ingestion	Residential PRG	SB-12 (4 ft)
Ethylbenzene	7,800,000	400,000	260
Isopropylbenzene	N/A	570,000	84
P-Cymene	N/A	N/A	65
Naphthalene	3,100,000	56,000	2,200
Sec-Butylbenzene	N/A	220,000	82
Toluene	16,000,000	520,000	38
1,2,4-Trimethylbenzene	N/A	52,000	3,100
Total Xylenes	160,000,000	270,000	1,010

^{*}All results are expressed in ug/kg.

Site Summary and Conclusions

DHEC file information indicates that five USTs have been removed from the Wando Grocery site. The results of the LSA indicate that the shallow soils at the site have been impacted by moderate to high concentrations of petroleum-based contaminants related to the previous UST system. Additionally, several other low level contaminants were identified including, p-Cymene, toluene, and xylenes. According to the OVA results, all of the soil borings completed along the SC-41 right of way area at the Wando Grocery site were contaminated. The concentrations of petroleum-based contaminants in the soils are considered moderate to high and indicate likely significant ground water impact. Potential ground water impact from the presence of these contaminants can only be positively quantified with the collection and analysis of ground water samples. Based on the shallow nature of the soil contamination detected, and the relatively shallow water table at the site (approximately 4 feet), there is a potential for encountering contaminated soils and/or ground water during any excavation activities at the site.

A site location map and site plan for the site are included on the following pages as Figure 5 and Figure 6.

Site #4 - Former SCDOT Section Shed

Site Description

The Former SCDOT Wando Section Shed, a LUST site (DHEC ID # 01077), is located in the Project Corridor area on the north side of SC-41, adjacent to the Wando River. The Former SCDOT Section Shed consists of a partially paved lot with a chain link fence surrounding the paved portion of the site. The site formerly utilized two relatively small USTs for the storage of diesel fuel. A fuel release was reported for the site, and the 1,000 gallon, and 560 gallon UST formerly present at the site, were abandoned by removal. A DHEC UST Program representative indicated that a single soil and ground water sample were collected and analyzed at the site subsequent to the removal of the USTs. The results of the assessment indicated that contamination was not present at concentrations considered by DHEC to represent a significant threat to the health of humans, or to the environment. An NFA status was issued for the site in May 1990. Due to the NFA status of the site, the DHEC file has been purged and is no longer available.

Limited Subsurface Assessment

Two soil borings were installed at the site via a truck mounted Geoprobe 5400 on June 15, 2005. The soil boring locations were chosen in order to assess the proposed water main area on the Former SCDOT Section Shed site. The soil borings were advanced to approximate total depths to eight feet bgs. The approximate depth of the shallow water table is four feet. The shallow subsurface soils consisted primarily of fine to medium grain sands and silty clays. The locations of the soil borings are indicated on the site plan included as Figure 8.

Soil samples were collected from each borehole at two-foot intervals. The soil samples were screened on-site for organic vapors with a portable OVA. Results for organic vapor analysis of each soil sample are included below in Table 7. The soil sample, above the water table, that exhibited the highest OVA result was placed in appropriate laboratory provided containers. The sample containers were then placed on ice for transport to the laboratory. The soil samples were analyzed by a certified laboratory for VOCs utilizing EPA approved method 8260B. The positive laboratory analytical data is summarized below in Table 8. The EPA Region 9 Residential PRGs and the DHEC Dermal Contact /

Page 18

Site Summary and Conclusions

The results of the LSA indicate that the shallow soils, at the site, have been impacted by relatively low concentrations of petroleum and non-petroleum contaminants including acetone, MEK, carbon disulfide, ethylbenzene, isopropylbenzene, and xylenes. No chemicals were detected at levels exceeding the PRGs, or RBSLs for the Former SCDOT Section Shed site. The analytical data indicates that the shallow soils at the site do not appear to pose a significant exposure risk; however, potential ground water impact from the presence of these contaminants can only be positively quantified with the collection and analysis of ground water samples. Additionally, it is suspected that the soil contaminants detected may potentially be present due to contact with contaminated ground water, which may vary slightly in depth seasonally and tidally. Based on the shallow nature of the soil contamination detected, and the relatively shallow water table at the site (approximately 4 feet), there is a potential for encountering contaminated soils and/or ground water during any planned excavation activities at the site.

Site #5 - Cohen Gaskins Jr. Property

Site Description

The Cohen Gaskins Jr. Property site is located at the SC-41 and Clements Ferry Road intersection. The Cohen Gaskins Jr. Property site is primarily undeveloped. One former dispenser island is currently located at the site and several ground water monitoring wells are present from previous environmental assessment activities. Based on the presence of the former dispenser island on the property, it appears that the site formerly served as a retail gas station. DHEC file information indicates that petroleum based subsurface contamination has been documented on the Cohen Gaskins Jr. Property site. Additionally, the immediate Project Corridor area has been adversely impacted by petroleum-based contamination. The concentrations of petroleum based contaminants identified in the soil and ground water during previous environmental assessment activities are significantly elevated above the RBSLs established by DHEC as a lower threshold for conditions that represent a significant risk to human health and to the environment.

Limited Subsurface Assessment

Four soil borings were installed at the site via a truck mounted Geoprobe 5400 on June 15, 2005. The soil boring locations were chosen in order to assess the entire Cohen Gaskins Jr. property. The soil borings were advanced to approximate total depths of four feet below ground surface (bgs), which was the approximate depth of the shallow water table. The shallow subsurface soils consisted primarily of fine to medium grain sands and silty clays. The locations of the soil borings are indicated on the site plan included as Figure 10.

ARM ENVIRONMENTAL SERVICES, INC.

Soil samples were collected from each borehole at two-foot intervals. The soil samples were screened on-site for organic vapors with a portable OVA. Results for organic vapor analysis of each soil sample are included below in Table 9. The soil sample, above the water table, that exhibited the highest OVA result (SB-19) was placed in appropriate laboratory provided containers. The sample containers were then placed on ice for transport to the laboratory. The soil samples were analyzed by a certified laboratory for VOCs utilizing EPA approved method 8260B. The positive laboratory analytical data is summarized below in Table 10. The EPA Region 9 Residential PRGs and the DHEC Dermal Contact / Ingestion RBSLs for the positive contaminants are included for comparison. The complete laboratory analytical data is included in Appendix B.

Site Summary and Conclusions

DHEC previous environmental assessment data and the results of the LSA confirm that the shallow soils at the Cohen's Gaskins Jr. Property site have been adversely impacted by high concentrations of petroleum-based contamination. The soil analytical results above also indicate significant concentrations of other non-petroleum contaminants. Although none of these contaminant concentrations exceed the comparative standards provided, significant soil contamination is indicated. Documented ground water contamination exists on the site and there is a high potential for encountering contaminated soils and/or ground water during any planned excavation activities.

A site location map and site plan for the site are included on the following pages as Figure 9 and Figure 10.

3.0 Project Conclusions

The results of the Phase II LSAs indicate that soil contamination is present at all five of the sites investigated within the Project Corridor. Although the soil contaminant concentrations vary, potential ground water impact from the presence of these contaminants can only be positively quantified with the collection and analysis of ground water samples. Additionally, it is suspected that some of the contaminants, such as acetone, MEK, and other non-petroleum compounds, may potentially be present due to contaminated ground water, which may vary slightly in depth seasonally and tidally, and which may also indicate a local / regional ground water contamination issue. Individual conclusions are provided for each site in the individual sections of this report; however, overall, based on the shallow nature of the soil contamination detected, and the relatively shallow water table at the sites, there is a potential for encountering contaminated soils and/or ground water during any planned excavation activities on the sites.

4.0 Warranty

Services provided by ARM in this environmental assessment have been conducted in accordance with generally accepted environmental practices. This report has been generated solely for the use of the client. The information presented in this report is based only upon our site observations at the time of the site reconnaissance and data generated during our site reconnaissance. We cannot be responsible for the accuracy of information provided by others; however, we have no reason to suspect that any of the information provided is inaccurate. We accept no responsibility of damages or claims resulting from past or future environmental impact to the site caused by on or off-site activities or contamination, nor do we accept responsibility for subsequent remediation. This study is intended to be a non-biased assessment of on-site environmental conditions. No other warranties, either expressed or implied, are made.
